

WELCOME GUESTS AND STAFF BACK BY IMPLEMENTING GLOBALLY-RECOGNIZED SAFETY STANDARDS

Guests and staff will be more confident when your building displays either the WELL Health Safety Rating or Fitwel Viral Response Module seal at your door. Click on the icons below to learn more about both of these new certifications that have been recently developed by international recognized experts in response to COVID concerns. Achieving a safe re-entry is quicker and less costly than a full scale health and wellness rating for your building, yet provides building occupants with assurances of best practices and safety.

Benefits

- High levels of staff and guest protection
- Mitigates risks by proactive actions
- Provides defined steps towards healthy building
- Cost effective

Our team will work with your facility team to develop a customized strategy that best suits your unique property needs. We are flexible to work with you in any manner that meets your needs, as either the comprehensive provider, or as an air and water quality sub-consultant to support your internal team self-performance of the non-engineering aspects of certification.

Core Areas of Focus

- Cleaning and Sanitization Procedures
- Emergency Preparedness Programs
- Health Service Resources
- Air and Water Quality Management
- Stakeholder Engagement and Communication

PREPARING FOR THE FUTURE

Establish your property as a refuge of health, making it more competitive in the future. While on-site, our team can also assess your building ventilation system, air and water treatment water system, and develop air and water quality monitoring systems to continue the wellness emphasis for your facility. This assessment can also provide input for future capital improvements.

“Certifying under either program allows the owner and property manager to focus on their respective expertise and leave identifying the most appropriate steps to mitigate risk of viral transmission to the standards set by independent global subject matter experts.”
